GEO LOCATOR

INSTRUCTIONS

This will only work for a domain with https. An SSL is needed for this to work in most of the popular browsers. You can get a free SSL from CloudFlare.

Wednesday 15th of March 2017 04:22:27 PM

IP Address:
107.77.204.216

Your Location:

Exact Address:
4006-4010 Morris Ct, Chesapeake, VA 23323, USA

GPS Coordinates
36.7552638°, -76.35405639999999°

Device and Browser Info
Mozilla/5.0 (Windows NT 6.1; WOW64; rv:51.0) Gecko/20100101 Firefox/51.0

Referrer URL:
https://legionwire.com/

After you have your free SSL with HTTPS set up, (it can take up to 48 hours) just upload the files to your webserver. This uses the Google Map reverse API to get the exact loaction of the visitor and also other information. This will work even if they are using a VPN or proxy as long as they have GEO LOCATION enabled which most mobile users do.

stylesheet
delete_log_file_now.php
getLocation.php
index.html
logfile.txt
Screenshot.jpg
stylesheet.zip

This will create a log file in the backend with all of the visitors information including their exact location.

Use "delete_log_file_now.php" to delete the log whenever you need it. Just open it with your browser.
